

BALANCED

MODEL PERFORMANCE SHEET Q1 2020

MODEL OBJECTIVE

The balanced portfolio is a medium risk portfolio which invests equally between defensive and growth assets. This portfolio is suitable for investors who are prepared to accept short-term losses in order to achieve better long-term returns. The DLSCM balanced portfolio should have an expected return that outpaces cash by approximately 5% over a 10-year holding period. There should be growth in the real value of assets over the long run, while reducing risk.

COMMENTARY

This quarter has not been an easy one for most investors. Nobody could have predicted at the start of this year that large parts of the global economy would be brought to an abrupt halt by the COVID-19 pandemic. Markets such as the NASDAQ and S&P 500 reached record highs on February 19th. From February 24th-28th, stock markets worldwide reported their largest one-week declines since the 2008 financial crisis. This was mainly in response to Covid-19 and an oil price war between Russia and the OPEC countries led by Saudi Arabia. The S&P 500 fell 17.87% over Q1 while MSCI Europe ex-UK and World fell 21% & 19.2% respectively.

Fixed income has held up with government bonds rising in price in response to central bank stimulus. However, concerns about the effect of the shutdowns on corporate profits have led to corporate bond prices declining, which will have detracted from the returns with high yield energy bonds the worst hit.

This unprecedented shock requires an unprecedented policy response. Central bank reaction began early in March as similar liquidity plans were announced. While the ECB did not cut its rates, they launched an extra emergency bond-buying program worth €750bn. The US Fed announced 2 cuts (totalling 1.5%) in interest rates taking them to zero and a bond purchasing scheme of \$700bn.

Governments announced substantial support plans - \$2tn from the US, €1.1tn from Germany, UK £31bn to name a few. The debate has now moved on from whether there will be a recession this year, to how deep and long it will be.
